

The plugin you are using seems to generated a bad URL.
This URL does not look like DEFLATE data.
It looks like your plugin is using HUFFMAN encoding.

This means you have now to add an header ~1 to your data. For example, you have to change:
<http://www.plantuml.com/plantuml/png/fVXJbtswEL3zKwY-pM3Bab1IKQIjrp...>
to
<http://www.plantuml.com/plantuml/png/~1fVXJbtswEL3zKwY-pM3Bab1IKQIjrp...>

It will work this way

You may contact the PlantUML team at plantuml@gmail.com

But you should also probably contact the plugin authors you are currently using and send them this image

For the record, here is your data:

```
